EXPERIENCE

Blue Margin, Fort Collins, CO — Data Analytics Consultant

May 2023 - March 2025

Developed elegant and performant Power BI reporting suites that deliver actionable insights, enhancing clients' decision-making processes.

Managed multiple clients and projects simultaneously, providing expert consultation and end to end support to elevate their BI initiatives, showcasing strong project management and communication skills.

Develop scalable, high-performance data models using the Kimball Method, optimizing data-lake and data-warehousing solutions for better efficiency.

Leverage several ETL technologies (Python, SQL, Power Query, DAX) to transform raw data to meet clients' business requirements.

Apple Inc, Las Vegas, NV — Manager

March 2020 - January 2022

Support and oversight of 150+ employees in all areas of business - Genius Bar | Business Sales | Operations | Service Delivery.

Curated quarterly strategy with all departments using Tableau, resulting in quarter over quarter top performance in multiple KPI's.

Developed and supported the technical teams' knowledge base for best practices to diagnose and repair software and hardware issues.

Trained sales teams by learning new technologies and teaching how they might be presented to customers.

Zumiez, Las Vegas, NV — District Manager

November 2006 - February 2020

Provide leadership, guidance and mentorship for 9 locations in NV/UT.

Created and conducted business analysis presentations to outline territory performance, strengths and opportunities in KPI's.

Extracted and interpreted data patterns to translate findings into actionable outcomes.

Implemented strategy as the company navigated digital sales environments.

Grew territory from \$9.8M to \$14.2M in 4 years

Assisted with design and testing UX for in store scheduling tools.

Communication

Multi-Industry Reporting
Experience

Adaptable and Solution
Oriented

Project Management

CERTIFICATES

Microsoft Certified Power BI
Data Analyst Associate
(PL-300)

EDUCATION

Springboard

December 2021 - March 2023

An intensive software engineering program entailing front-end, back-end and database development. Languages learned were Python, SQL and Javascript along with tools/frameworks like React, Node, Flask, SQL Server, and Power BI amongst others.

PROJECTS

Power BI Reporting

Extensive anonymized past client projects and reporting examples. Portfolio includes what data source or ERP raw data was extracted from and the process of getting to an end result.

BlogStone

A blog space built using React, Node/Express and PostgreSQL database which furthered my understanding of routing, hooks and password encryption.

SpotIt

Developed using Python, Flask and SQLAlchemy as an app for the action sports community to share parks and 'spots' with their respective community.

Jobly

A mock job portal where users can search, view and apply to open roles based on company, equity and pay. Built using React, Node/Express and PostgreSQL.
